SAFETY FORCE EXPERTISE

Since its creation in 2010, the Marcus Group has grown to become a major player in the security market. Our services are present practically countrywide.

With decades of experience in the armed forces and in various fields of business, the founders have created a well organised company that provides high quality services in a wide range of asset protection areas.

As part of the company group, MARCUS ANQUAN Ltd., founded jointly by Anquan Kft. and Marcus Facility Group Zrt., specializes in addressing security challenges for East Asian industrial companies. We consider the cultural, linguistic, and business mindset differences while providing our services and at the same time we are taking into account the domestic legal environment, to best assist our clients.

“

**It is wrong to trust
in the castle
and not in the soldier!**

Our philosophy is that success can only be achieved through quality work, which requires skilled and respected people. A satisfied employee who is skilled both physically, theoretically and can perform their job with confidence, commitment and without error. The appearance and preparedness of security staff is of paramount importance because they are often the first person a visitor to your premises meets or encounters.

In the 21st century, effective asset protection is unthinkable without digital security devices. The right combination of man and technology can guarantee optimal and economic efficiency. Our company is constantly exploring the latest innovations in the security market, which we incorporate into our own developments together with our IT partners.

FINANCIALLY STABLE
BUSINESS ACCORDING
TO BISNODE RATING

Prevention is a key aspect in the planning and organisation of our asset protection services. A well-designed security system can prevent the vast majority of unwanted incidents.

In addition to providing a high quality service, our clients' trust and security is our top priority.

Since its inception, our group has been using the EFQM self-assessment model, which goes beyond ISO certification and is based on TQM principles, incorporating the ISO 9001 quality management system, but setting higher standards.
